

Editorial

Human Resource Development has played important roles in developing countries. Human resources have a significant impact on profitability, efficiency and overall effectiveness of the country. The greatest and the most precious asset of a country is its human resource as it is they who exploit all natural resources and potentials of a country. These human resources form the wealth of a nation. It is on the quality of citizens that the prosperity of a nation depends.

The confluence of rapid technical change, technology advancement, globalization and economic liberalization in recent years has prompted governments in developed and developing countries alike to prioritize skills development of human resources as a key strategy for economic competitiveness and growth. Advance in technology make human resource more challenging. Technology has changed the business world many times over. In the Information Age, the advent of technology has increased that impact significantly. Many businesses cannot even function without the use of technology. This impact is seen in nearly all areas of business, including human resources, where technology continues to have a significant impact on human resources all over the world. The future of human resources is being connected to technological development and challenging it offers rooms for innovators inside and outside the industry to adapt new developments to create and redesign the business experiences with innovation.

HRD Journal welcomes the academic or research paper from those researchers to share ideas about human resource development in different countries.
